INTRODUCTION

System Description

The UMU Event Management System is a web-based application developed to help manage university events efficiently. The system allows students to register, log in, browse available events, and RSVP to events of their interest. It also provides an administrative interface where administrators can create, edit, and delete events as well as manage users.

System Features

- **User Registration and Login.** Users can create accounts and log into the system securely.
- **Session management.** Users remain logged in until they log out, after which protected pages cannot be accessed.
- **Data Entry through forms.** Admin users can create events using forms, and students can RSVP to events.
- **Input validation.** The system checks for missing or incorrect inputs and provides feedback.
- **Dynamic Data Display.** Events and user data are retrieved from the database and displayed dynamically.
- **Search and filter.** Users can search and filter events based on different criteria.
- **Edit and delete records.** Admin users can update or delete event records.
- **Role based access.** The system differentiates between admin and student roles, with different permissions.
- **Storage.** All data is stored in a MYSQL database.

Database Structure

The system uses a MySQL database with three main tables:

Users. Stores user information such as name, email, password and role (admin/student).

	Field	Type	Null	Key	Default	Extra
►	id	int	NO	PRI	NULL	auto_increment
	full_name	varchar(150)	NO		NULL	
	email	varchar(150)	NO	UNI	NULL	
	password	varchar(255)	NO		NULL	
	role	enum('student','admin')	YES		student	
	reg_number	varchar(50)	YES		NULL	
	created_at	timestamp	YES		CURRENT_TIMESTAMP	DEFAULT_GENERATED

Events. Stores event details such as title, description, date, time, venue, and capacity.

	Field	Type	Null	Key	Default	Extra
▶	id	int	NO	PRI	NULL	auto_increment
	title	varchar(200)	NO		NULL	
	description	text	YES		NULL	
	category	varchar(100)	NO		NULL	
	event_date	date	NO		NULL	
	event_time	time	NO		NULL	
	venue	varchar(200)	NO		NULL	
	capacity	int	NO		100	
	created_by	int	YES	MUL	NULL	
	created_at	timestamp	YES		CURRENT_TIMESTAMP	DEFAULT_GENERATED

RSVPs. Stores relationships between users and events to track attendance.

	Field	Type	Null	Key	Default	Extra
▶	id	int	NO	PRI	NULL	auto_increment
	user_id	int	NO	MUL	NULL	
	event_id	int	NO	MUL	NULL	
	rsvp_date	timestamp	YES		CURRENT_TIMESTAMP	DEFAULT_GENERATED

System Screenshots

Login page

Registration Page

Student Dashboard

The Student Dashboard features a dark sidebar with the 'UMU Events STUDENT PORTAL' logo and a menu including 'Dashboard', 'Browse Events', 'My RSVPs', and 'My Profile'. The main content area is titled 'Welcome, kagumya!' and includes a 'Browse Events' button. It displays three summary cards: 'TOTAL EVENTS 5', 'UPCOMING 5', and 'MY RSVPS 1'. Below these, the 'Upcoming Events' section lists three events: 'Freshers Welcome Party' (Social, May 20, 2026), 'Tech Innovation Summit' (Academic, May 25, 2026), and 'Guild Leadership Debate' (Guild, Jun 01, 2026). Each event card shows details like time, location, RSVP count, and capacity.

Admin Dashboard

The Admin Dashboard has a dark sidebar with the 'UMU Events ADMIN PANEL' logo and a menu including 'Overview', 'Dashboard', 'Events', 'All Events', 'Create Event', 'Users', 'View Attendees', and 'Manage Users'. The main content area is titled 'Admin Dashboard' and includes a '+ New Event' button. It features four summary cards: 'TOTAL EVENTS 5', 'UPCOMING 5', 'STUDENTS 1', and 'TOTAL RSVPS 1'. Below these, the 'Recent Events' table lists five events with 'Edit' buttons, and the 'Recent Registrations' table shows one registration for 'kagumya Ayebare'.

Event Page

The 'Manage Events' page in the Admin Panel includes a search bar, a category filter set to 'All Categories', and a 'Filter' button. It displays a table with 5 columns: '#', 'TITLE', 'CATEGORY', 'DATE', 'VENUE', 'RSVPs', and 'ACTIONS'. The table lists five events, each with 'Attendees', 'Edit', and 'Delete' buttons in the actions column.

Challenges Faced

During development, several challenges were encountered:

- Difficulty connecting PHP to MySQL due to incorrect credentials.
- It was challenging to create a search system that allows multiple filters while keeping it secure. This was solved by building the query step by step and using prepared statements to prevent security risks.
- It was challenging to maintain the same design across student and admin pages. This was solved by using a shared CSS file and reusable components like the sidebar.

- It was difficult to stop duplicate RSVPs. This was solved by adding a database rule that prevents a user from registering for the same event more than once.

Lessons Learned

From the challenges faced during development, several lessons were learned:

- We learned how to properly connect PHP to a MySQL database and the importance of using correct database details.
- We learned how to make search features more secure by using prepared statements.
- We learned the importance of using shared CSS files and reusable components to keep the system design consistent.
- We learned how database rules can help prevent duplicate data and improve system reliability.
- We improved our problem-solving and debugging skills while fixing errors during development.
- We gained a better understanding of how the frontend, backend, and database work together in a web application.
